

<b>Koi</b>	
Size:	Up to 2m long
Weight:	Up to 90.9 kg
Life span:	47 years
Optimum water temp:	20°C - 25°C
Will survive in water:	10°C - 30°C
Fish stops feeding:	12°C
Fish die:	2°C
pH ideal:	7.5
pH tolerant:	6.5 - 9.0
Hardness:	75 -150 ppm
Food:	<p>Omnivorous</p> <p>Will eat a wide variety of foods, including peas, lettuce, and watermelon. In the winter, their digestive systems slow nearly to a halt, and they eat very little, perhaps no more than nibbles of algae from the bottom.</p>
Habitat:	<p>Koi are a domestic variety of fish, so they don't really have a "natural" habitat. Koi normally live in ponds, and sometimes lakes, with moderate to strong water current. Koi normally live in fairly cool water, but they can tolerate warm water for part of the year.</p>
